PROFESSIONAL SUMMARY

Module leader with experience managing the end-to-end delivery of a large-scale academic capstone programme across five campuses, leading a team of 12 to 15 lecturers to consistent quality and delivery standards for 800+ participants each cycle. Comfortable coordinating multiple concurrent priorities, timelines, and stakeholders, academic, operational, and cross-campus, to keep delivery on track, and experienced supporting both in-person and online programme components. Builds the reporting and quality assurance tools that keep delivery consistent at scale, most recently a module data dashboard and automated reporting template adopted across all five campuses.

CORE COMPETENCIES

Programme & Delivery Management: Multi-site programme coordination (5 campuses) | Team leadership (12–15 staff) | Delivery readiness & quality standardisation | Timeline & logistics management | Blended (in-person & online) delivery

Stakeholder & Relationship Management: Academic & operational stakeholder liaison | Client-facing communication | Cross-functional collaboration | Staff training & upskilling

Quality & Reporting: KPI tracking & reporting | Assessment standardisation | Process automation | Power BI | Excel | Moodle

Research & Communication: Policy & report writing | Public presentation | Dataset analysis | Stakeholder-facing documentation

WORK EXPERIENCE

Lecturer & Module Lead | Global Banking School, London *February 2025 – Present*

- Lead and coordinate a team of 12 to 15 lecturers across five campuses in the end-to-end delivery of a foundation year capstone module to 800+ students, ensuring consistent quality, standards, and delivery timelines throughout each cycle.
- Run standardisation meetings and produce marking guidance, grading comparison materials, and assessment checklists to maintain consistent delivery standards across teaching teams and campuses.
- Coordinate delivery readiness and manage multiple concurrent priorities, including assessment design, reporting cycles, and cross-campus logistics, working closely with academic and operational stakeholders to meet agreed timelines.
- Support delivery across in-person teaching and online, Moodle-based components, tracking completion and engagement data to maintain quality and consistency across formats.
- Built a Power BI dashboard and an automated Excel reporting template adopted by all module lead staff across five campuses, improving consistency and giving leadership back approximately 2 hours per week previously spent on manual reporting.
- Designed and delivered training for fellow lecturers on using gamification and AI tools appropriately in the classroom, improving student engagement and raising staff confidence with new technology across teaching teams.

Marketing Data Analyst | Stenn (Fintech), London *2024 – 2025*

- Coordinated with senior stakeholders across the business to translate marketing and customer data into strategic decision-making, working to agreed reporting timelines.
- Built data pipelines and automated reporting processes, including a flagging system to identify report-ready periods, reducing manual overhead and improving delivery consistency.

Researcher | Irish Research Council, Dublin *2021 – 2023*

- Awarded IRC funding to research business resilience in the Irish tourism sector, producing a comprehensive literature review and a proposed conceptual framework applicable to policy and industry.
- Produced written research outputs and presentations communicating the review's findings to academic and industry audiences.

Growth & Development Executive | Imvizar (AR Start-Up), Dublin *2022 – 2023*

- Delivered consultative, client-facing pitches to prospective clients, combining data-driven market analysis with clear stakeholder communication.
- Analysed market trends and customer data to guide budget allocation and strategic planning for an early-stage technology company.

SELECTED PROJECTS

USA to UK Immigration Dashboard

- Analysed and built an interactive dashboard to examine immigration from the USA to the UK from 2013-2026 quarter by quarter. The dashboard allows the data to be segregated based on gender and age group to see the stark immigration differences between working-age men and women immigrating from the USA.

Marketing Analytics Dashboard

- The full marketing funnel is able to be viewed in this interactive dashboard in which customer-type and market can be seen to showcase differing attributes in terms of AOV and CAC.

Technology in the Classroom Training Initiative

- Designed and delivered training sessions for fellow lecturers on using gamification and AI tools appropriately in the classroom, improving student engagement and raising lecturers' own confidence and technology literacy across teaching teams.

Cost of Living & Crime Rates, Chicago

- Built an end-to-end data pipeline in Python, web scraping cost-of-living data from Numbeo and combining it with a 1.8 million row Chicago crimes dataset. Applied feature engineering and data imputation benchmarked against US inflation data, then used correlation analysis, regression, and machine learning methods to examine the relationship between economic conditions and crime rates, producing a working predictive model.

Predicting Bitcoin Prices

- Developed and compared predictive models for Bitcoin prices using ARIMA, ARDL, random forests, and linear regression, incorporating sentiment and macroeconomic data. Evaluated in-sample and out-of-sample performance across model types.

Module Feedback Sentiment Classifier

- Built a Python-based natural language classifier in Google Colab to analyse open-text student feedback for sentiment and recurring themes, then used the output to brief lecturers on where to focus module improvements.

EDUCATION

M.Sc. Data Science and Econometrics | Goldsmiths, University of London *1:1 Distinction*

M.Sc. Tourism Management | Technological University Dublin, Ireland *IRC Scholar*

B.Sc. Economics and Business | University of Kansas, USA *1:1 Distinction*
